

Cicalderm Scar Silicone Gel

This product helps improve the appearance of fresh scars and, using a non-invasive technique, prevents excessive formation of abnormal scars. Cicalderm Scar Silicone Gel is a topical treatment designed to enhance scar healing and refine their appearance.

Active Ingredients

Silicone: Forms a protective barrier, locks in moisture, reduces redness, and relieves itching.

Rosehip Oil: Promotes healing, skin regeneration and hydration.

Vitamin C: Stimulates collagen synthesis and accelerates wound healing

How to Use

- Ensure the wound is fully closed or stitches have been removed before application.
- Cleanse and dry the affected area thoroughly.
- Gently apply a thin layer of gel to the scar without rubbing or massaging.
- Allow the gel to dry completely (approximately 4 minutes).
- Once dry, sunscreen or makeup can be applied over the area.
- For optimal results, use Scar Silicone Gel twice daily for 60–90 days.

Indications

- Helps improve and repair fresh wound scars.
- Helps to minimize blepharoplasty scarring
- Helps to reduce the formation of keloid scars

CICALDERM

GET YOUR HEALING HERO

A Leader in Wound & Skin Repair

●●● CICALDERM ●●●

Cicalderm delivers advanced, science-backed solutions for effective wound care and skin restoration. Recognizing the growing demand for specialized treatments, we combine cutting-edge research and targeted technologies to develop high-quality products that restore skin health and beauty.

Currently, Cicalderm offers two specialized wound healing products:

1- Cicalderm Repair Cream - Ideal for healing closed surface wounds, including laser-induced wounds and first-degree burns.

2- Cicalderm Scar Silicone Gel - Improves fresh scars and prevents abnormal scar formation.

Cicalderm Repair Cream

This cream accelerates the healing of laser-induced wounds, minor injuries, and first-degree burns while soothing and repairing damaged, inflamed skin. Designed for rapid recovery, Cicalderm Repair Cream promotes fast healing of superficial skin damage.

Active Ingredients

Sucralfate: Reduces inflammation, promotes cell regeneration, and enhances wound healing

Zinc Oxide & Zinc Sulfate: Combat inflammation and support wound recovery.

Calendula Oil: Antimicrobial properties stimulate collagen synthesis and accelerate healing.

Alpha-Bisabolol: Antimicrobial, reduces inflammation and speeds healing.

Niacinamide: Reduces inflammation, helps wound recovery, and boosts collagen production.

Centella Asiatica Extract: Enhances healing, stimulates collagen and elastin synthesis, and repairs skin.

How to Use

- Cleanse the affected area thoroughly.
- Apply a thin layer twice daily until the wound is fully healed.

Indications

- Aids in treating closed wounds and skin irritations such as redness, itching, and burning.
- Reduces inflammation following cosmetic laser treatments.
- Supports recovery from first and second-degree burns.
- Assists in managing inflammatory dermatitis.
- Enhances healing after peeling, microneedling, or mole removal.
- Prevents and alleviates diaper rash in infants.
- Reduces post-chickenpox inflammation (once lesions have dried).
- Supports the healing of new stretch marks.
